To Whom It May Concern:

Controlled Systems is the foremost leader in aviation ground power equipment, specializing in 400Hz power conversion and distribution applications. Since 1981 Controlled Systems has been on the cutting edge of frequency converter product development with an installed base of over 1800 units in service. During these many years of product and market development Controlled Systems has expanded its market presence through the addition of 50/60Hz Power Conversion Equipment and D/C Power Supplies. Controlled Systems has an established presence in both the Military and Commercial aviation industry, with an in-depth knowledge of the individual technical and commercial issues associated with these two markets.

Controlled Systems has been using PowerPros, CANDURA Instruments' portable power quality analyzer, since 2008. They are used for commissioning tests and field maintenance work in both 400Hz and 60Hz power systems. We work in very demanding situations and need to depend on the reliability and accuracy of our instrumentation. We have found that the CANDURA Instruments' products are robust, reliable and simple to use.

CANDURA Instruments is a highly regarded supplier of portable power instrumentation.

Yours truly,

Frank Pazdric
Procurement Manager
