To Whom It May Concern:

SatCon Power Systems, of Burlington Ontario Canada, designs, manufactures and supplies electronic power conversion and energy management systems utilizing power electronics and advanced computer controls, to global markets. We offer power system solutions for a variety of alternative energy, power delivery, and testing and measurement applications. SatCon Power Systems has supplied over 450 MW of high-power DC power distribution equipment utilizing power transistor (IGBT) technology... more than any other company in the world.

SatCon Power Systems has been using Candura Instruments' power monitoring and analysis products for several years. The performance of their equipment and software is excellent and their product support is exceptional. We recently needed to test the performance of seventy large power supplies (>90KW) to military specifications. There were six test lines each with two Candura *PowerPro* power-monitoring units, one on the input and one on the output of each system. The performance verification went very smoothly and thanks to Candura's support with custom software, we were able to complete testing within our very aggressive test schedule.

I highly recommend the Products and Services of Candura Instruments.

Yours truly,
